therefore the binomial coefficient three choose two is equal to three.

And if you want to see where this

And if you want to see where this number comes from,

why it has to be three,

then one way to do it is to specify the locations of the ones.

So we can do that by specifying ordered pairs from one up to three.

For example, we can specify that we put one in location one

and then a one in location two.

That will correspond to the sequence 110.

Or that we put a one in location one and then a one in location three, and that will correspond to the sequence 101.

In how many ways can a basketball coach select 5 starting players form a team of 15?

15! 5!10!

 $\bigcirc \quad \frac{15!}{5!}$

None of the above

Explanation

It can be deducted from partial permutation, but the order does not matter. It is $\binom{15}{5} = \frac{15^{\frac{5}{5}}}{5!} = \frac{15!}{5!10!}$.

Explantion
${5 \choose 2} = 10.$
• In how many ways can you select a group of 3 people out of 5?
10
25
125
O None of the above
Explantion
$\binom{5}{3} = 10.$
• In how many ways can you divide 5 people into two groups, where the first group has 2 people and the second has 3?
O 10
<u> </u>
125
O None of the above
✓
Explantion
After we determine the group of 2, the group of 3 is determined as well, hence the answer is ${5 \choose 2} = 10$.

A standard 52-card deck consists of 4 suits and 13 ranks. Find the number of 5-card hands where:

• any hand is allowed (namely the number of different hands),

Explanation

This is simply $\binom{52}{5}$.

• all five cards are of same suit,

Explanation

There are 4 suits in total and 13 cards in each suit, hence $4 \cdot \binom{13}{5}$ hands.

· all four suits are present,

Explanation

One of the 4 suits will appear twice, hence $4 \cdot {13 \choose 2} \cdot 13^3$ hands.

all cards are of distinct ranks.

1317888	✓ Answer: 1317888
1317888	

Explanation

First pick 5 out of 13 ranks, then choose their suits. Therefore there are $\binom{13}{5} \cdot 4^5$ hands.

? Hint (1 of 1): For example, for hands where all cards are of the same suit, count the number of hands with 5 clubs, or with 5 diamonds, etc.
